Overview

In the hospitality industry, enterprise resource planning (ERP) is essential for optimising operations and business strategies in a variety of settings, such as chain hotels, casinos, and cruise lines. Businesses may improve their forecasting, reduce expenses, respond quickly to opportunities, and report outcomes more efficiently by utilizing ERP technology. Hotel management may be revolutionized with ERP software, bringing forth a whole new level of guest experience and daily responsibilities.

A Hotel Management System in Odoo works like a smart assistant that helps hotels run smoothly. It takes care of everything—from room reservations to housekeeping and restaurant services—so that hotel staff can focus on giving guests a great experience.

With an online booking system, guests can easily reserve rooms from the website without any hassle. Housekeeping is well-organized, ensuring clean and comfortable rooms for every stay. The restaurant management feature keeps track of orders, menus, and billing, making dining services smooth and efficient.

The system also provides reports on hotel performance, restaurant sales, and finances, helping managers make better decisions. With automated billing and easy financial tracking, handling payments becomes simple and smooth.

Overall, this system acts as a helping hand for hotels, making daily tasks easier, improving guest experiences, and ensuring everything runs perfectly behind the scenes.

Features

Hotel Menu Management

Our Hotel Management System in Odoo makes hotel operations smooth and efficient. Guests can easily book rooms online through the website, and their reservations instantly appear in the admin dashboard for easy tracking. From handling bookings to managing housekeeping, restaurants, and finances, this system ensures a seamless experience for both guests and hotel staff.

1. Handles Reservations :

Streamline front desk activities with a user-friendly interface. Handle guest inquiries, bookings, and registrations efficiently.

Dashboard / Room Availability :

In the dashboard, admins can simply view the types of rooms available with the service and amenities guests have added.

In the dashboard, admins can simply view the types of rooms available or reserved for the specified date range.

Room Reservations :

In the reservation section, you can reserve the room of your choice and the facilities you want to add as per requirements of the guests.

As you confirm the reservation, an invoice will be created.

Inquiries :

In the inquiry section, you can enter the details of the guest who wants to make a reservation for the room.

Here you will also have a smart button that shows the availability of the room to ease the process of making a reservation.

2. Housekeeping Service :

Under this section, the hotel manager can give the duties/activities to the inspector who is responsible for cleaning the rooms.

Manager can also configure if the said inspector has to see the cleanliness at the time of guest check-in, check-out or daily.

Activities can be configured by the manager and the time so that everyone is engaged in the designated activity.

3. Restaurant Management :

Table Booking :

In the table booking section, managers can book tables of guest's choice in advance, and that too according to their time.

Order :

In the order section the manager can add the food items that the guest has ordered and can also generate a KOT for the same.

Table Order :

Table order section is a combination of table booking and order section for the people who are not guests in the hotel so it works the same as table booking and order section also generates KOT.

Kitchen Order Ticket :

Kitchen Order Ticket is used to save the information of the guests and their orders which can be used by the hotel manager for further use.

4. Reporting :

States By Reservation Report:

In this report you can see a pivot view which is based on the number of reservations that have been made and their status.

States By Restaurants Report :

In this report you can see a pivot view which is based on the number of reservations that have been made at the restaurant.

Reservation List :

In this report, you will find the details of the guest that has made a reservation in a specific date range.

Room Used maximum :

In this report you can find the details of the room that has been used maximum in a specific date range.

Activity Report (Housekeeping) :

In this report you can find the details of all the housekeeping services that have been done in a particular room within a specific date range.

Restaurant Report :

In this report you can find the details of the reservations that are made by multiple guests, along with their total amount and the total orders each guest has given.

Check-in/Check-out :

You can generate a check-in/check-out list of the guests.

5. Configuration :

The There is a facility for pre-configured settings to streamline repetitive tasks. This includes configuring rooms, services, amenities, activity food items, tables, and floors.

Rooms :

This allows configuration of rooms i.e. give type and number to room and room types that allows to classify rooms in different categories.

Amenity :

This allows configuration of different types of amenities and different amenities of a hotel, it allows to configure unit of measurement, type of amenity and price of it.

Service :

This function is used to configure services that a hotel management can provide and we can manage charges of that service. Service types are used to categorise services.

Food Item :

Food item menu helps to configure different food items that are available in the restaurant and food item types are used to categorise food in different types.

Activity :

This function is used to configure day-to-day, check-in and check-out activities in the hotel. With activity types one can categorise these activities.

Table :

With table functionality one can specify the number of tables and respective capacity for the table.

Floor:

Foor functionality helps to manage floor number, which is used during room reservation.

6. Financial Management made easy :

Invoice Generation :

An invoice is generated based on the types of room isbooked and along with that the service and amenities guests have added.

Room Charges :

Room charges vary by the type of room the guest wants.

Workflow :

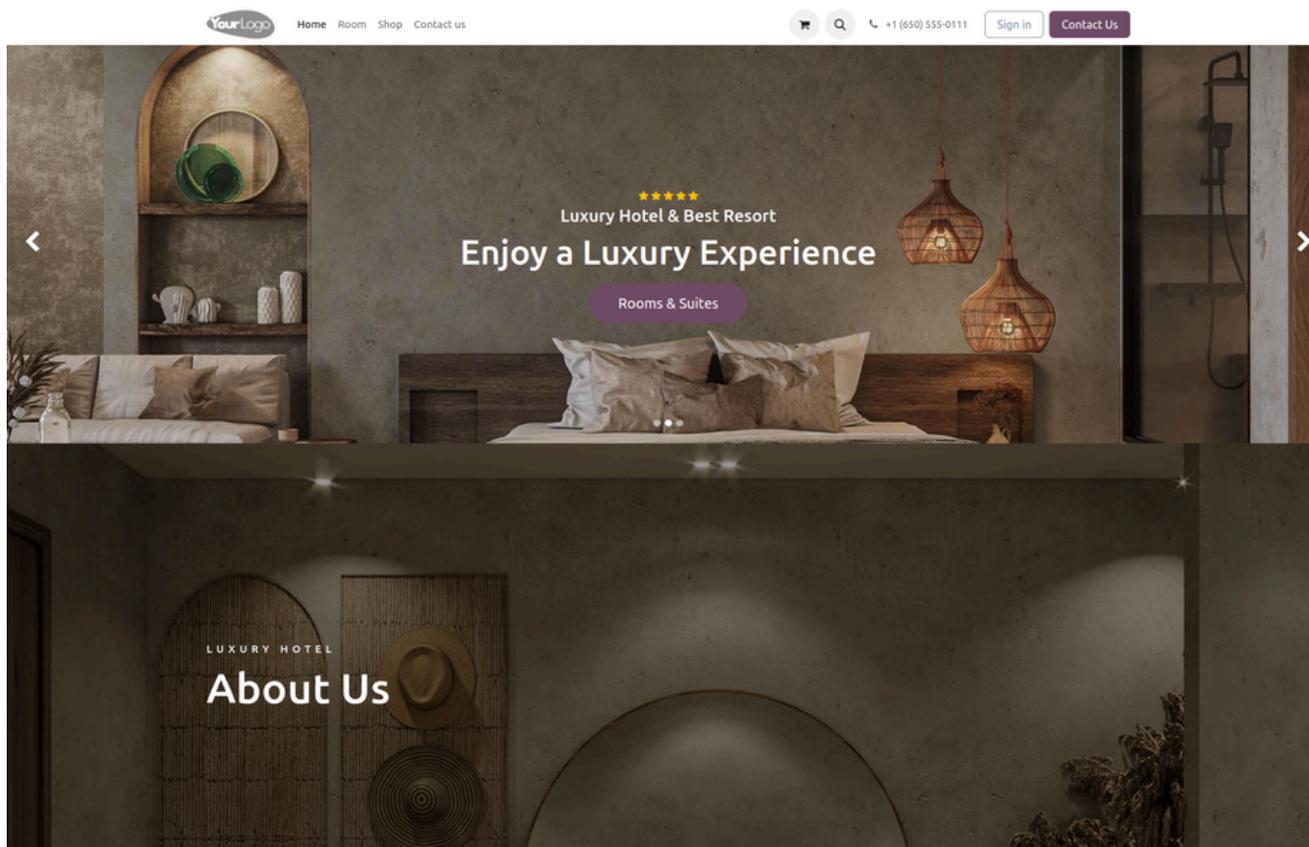

The Hotel Management Software of Jupical provides top to toe features that any Hotel will ever need to seamlessly do all their work:

The NO CODE Multi-Page Website:

By installing Jupical's Hotel Management Software you will get a full fledged editable website.

Below is a glimpse of the website :

Reports :

1. States by Reservation :

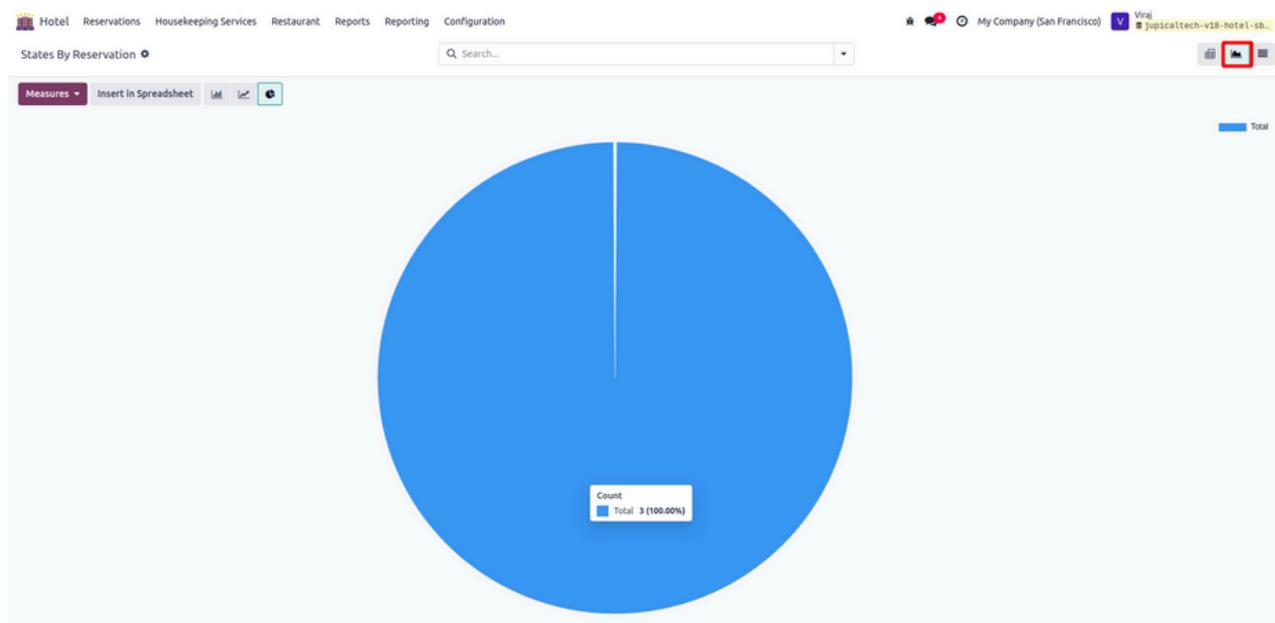

- States by Reservation Pivot :

The screenshot shows a pivot table report titled 'States By Reservation'. The report is displayed in a spreadsheet view. The table has columns for 'Count' and 'Reservation' for each reservation ID. The data is as follows:

	Count	Reservation	Count	Reservation	Count	Reservation	Count	Reservation
Total	1	1	1	1	1	1	3	3
R/00001	1	1					1	1
R/00002			1	1			1	1
R/00003					1	1	1	1

In this section you can view a report in pivot view based on the number of reservations that are done and the status of it.

- States by Reservation Graph :

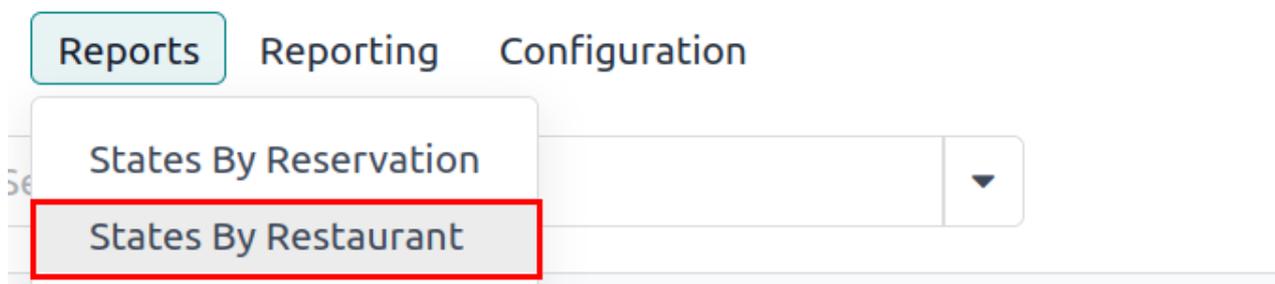

- States by Reservation List :

The screenshot shows a table listing reservation states. The table has two columns: 'Reservation No' and 'State'. There are three rows of data. The first two rows have 'State' as the value, and the third row has 'Confirm'. The application interface includes a navigation bar and a search bar.

Reservation No	State
R/00001	State
R/00002	State
R/00003	Confirm

2. States by Restaurant :

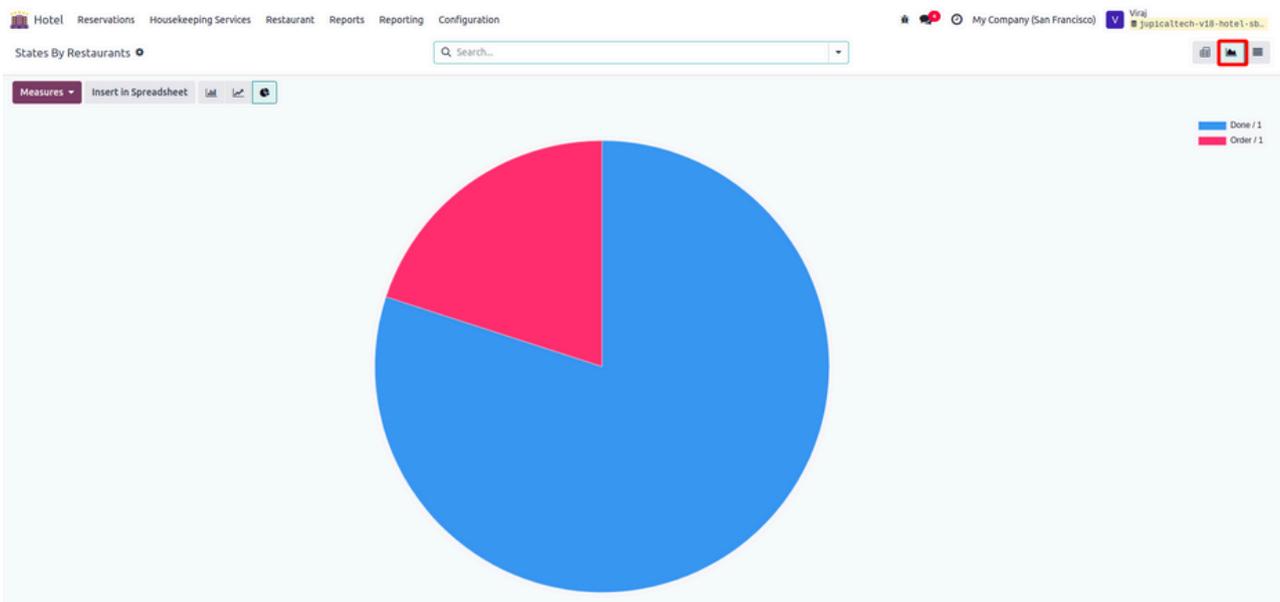

- States by Restaurant Pivot :

The screenshot shows a web application interface with a pivot table. The table has a 'Total' row and columns for reservation numbers R0/00001 through R0/00005. The data is as follows:

	R0/00001	R0/00002	R0/00003	R0/00004	R0/00005	Total
Total	1	1	1	1	1	5
R0/00001	1					1
R0/00002		1				1
R0/00003			1			1
R0/00004				1		1
R0/00005					1	1

- States by Restaurant Graph :

- States by Restaurant List :

The screenshot shows a web application interface with a list view. The list contains five rows, each with a checkbox, a reservation number, and a state.

Reservation No	State
<input type="checkbox"/> R0/00001	Done
<input type="checkbox"/> R0/00002	Done
<input type="checkbox"/> R0/00003	Order
<input type="checkbox"/> R0/00004	Done
<input type="checkbox"/> R0/00005	Done
